PROFESSIONAL SUMMARY

Founder building an enterprise software product end-to-end (architecture, engineering, cloud infrastructure, and client management) using an AI-native workflow. Background in high-stakes regulatory consulting where I mastered an unfamiliar, multi-jurisdictional compliance landscape from scratch, delivered a risk-scored strategic framework to C-suite leadership, and independently drove \$2.8M in client revenue recovery through original data analysis. Comfortable owning ambiguous, cross-functional problems spanning product, operations, and client strategy without a playbook.

SKILLS & TECHNICAL PROFICIENCIES

Development: React, TypeScript, Vite, Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker, Git/GitHub, REST APIs

Cloud & Infrastructure: Google Cloud Platform, BigQuery, Fly.io, Vercel

Analytical: SQL, Python (pandas, matplotlib), Excel (financial modeling, scenario analysis), quantitative research, data visualization

Business Operations: Project Management (Notion, Slack, Jira, Asana), client relationship management, Figma, Excalidraw

EXPERIENCE

Whis LLC *Pittsburgh, PA*

Founder & Principal

May 2026 – Present

- Founded and run a software company solo, owning product, engineering, infrastructure, and client relationship end-to-end; building Omni Prospect, a commercial intelligence platform, for a manufacturing holding company as first customer, with a broader goal of licensing across additional industry verticals
- Personally architected and built the full production application, React/TypeScript/Vite frontend, FastAPI (Python) backend, PostgreSQL with SQLAlchemy/Alembic migrations, Dockerized and deployed via Fly.io and Vercel
- Leading migration of the platform into the client's private Google Cloud Platform environment for secure, direct integration with the client's internal data (BigQuery), working directly with the client's cloud infrastructure vendor
- Own every non-technical function of the business personally: entity formation, business banking, vendor and tooling decisions, and client relationships with company leadership

St. Clair Hospital *Pittsburgh, PA*

Psychiatric Aide

Mar 2026 – Present

- Identified a recurring scheduling and fairness problem in the psychiatric emergency unit and independently began building an MVP tool to address it, unprompted (see Projects)
- Provide direct patient care in an acute inpatient psychiatric setting, working within a live operational environment with 24-hour coverage constraints and interdisciplinary coordination

Source 1 Healthcare Solutions *Pittsburgh, PA*

Consultant / Client Lead

Nov 2022 – Oct 2024

- Led U.S. market entry strategy for an international AI telehealth company entering a new regulatory market; independently mastered an unfamiliar multi-jurisdictional compliance landscape with no prior domain background and translated it into a risk-scored strategic options framework presented directly to C-suite leadership
- Recovered \$2.8M in client revenue and cut denial rates by 20% through independent SQL analysis of large-scale claims data, surfacing systemic operational gaps the client had not identified on its own
- Delivered strategic assessments and prioritized improvement roadmaps to 10+ enterprise clients; managed cross-functional stakeholder alignment across legal, clinical, operational, and engineering teams with zero compliance failures across all engagements

PROJECTS

Healthcare Policy & Regulatory Monitor (kas1172-dotcom.github.io/Healthcare_WeeklyNewsletter_Kapil/)

- Built an automated intelligence pipeline integrating 30+ government APIs and industry feeds into a lightweight, no-database Python workflow (JSON, vanilla JavaScript, scheduled jobs), eliminating hours of weekly manual research

Nurse Scheduling MVP (EMPATH Psychiatric Emergency Unit)

- Self-initiated, unpaid MVP to reduce ad hoc scheduling gaps in a 24-hour psychiatric emergency unit; not requested by management, built on personal initiative alongside a full patient-care caseload
- Designing a fairness-scoring engine that weighs call-offs, picked-up shifts, and PTO concessions, and an AI-driven schedule generator that supports fully custom per-nurse shift start/end times rather than fixed blocks

EDUCATION

University of Pittsburgh *Pittsburgh, PA*

Bachelor of Science, Psychology

Dec 2025
